Internet and Web Systems 1

Week 7 Report

Tasks Achieved:

1. I decide the layout of my website in this week and also worked on it.
2. Once the user logs in, the top bar will have a search bar where any book can be searched by the title name.
3. In the tab below it, I will have a home button and also browse by genre button. It will be a drop down menu where can select which genre books he wants to be displayed.
4. I plan to use bootstrap to design the frontend.
5. I made the first page of user sees after logging in this week.

Problems and Solutions:

1. On the first page after logging in, I wanted to create a slider view in which books will keep on sliding on continuously. I had a little bit roadblock while trying to create that.
2. I studied about it and got to know it is called the 'Bootstrap Carosel Plugin' which keeps on cycling through the elements. I used that to display the three booksof the day.
