Internet and Web Systems 1

Week 1 Report

Tasks Achieved:

1. As a part of this course along with the project, I plan to build my personal webpage to learn about building a good UI and also learn a front end framework.
2. I decided to finalize 'Bootstrap' as a Frontend framework for building my personal Webpage.
3. I developed and implemented the basic design for the index page of my personal Webpage.
4. I have used Bootstrap, CSS, HTML and JavaScript to accomplish it. I have made tabs such as 'Basic Information', 'Likes and Dislikes', 'Projects' and 'Connect with me'. I have also added the languages I know on it. At the end, I have added an 'LinkedIn' Icon and linked it to my LinkedIn.

Problems and Solutions:

1. One major issue I had during developing the index page was the to make tabs. I have tabs such as 'Basic Information', 'Likes and Dislikes', 'Projects' and 'Connect with me'. I could properly place them where I wanted them to.
2. I overcame this by studying the tutorials available online for bootstrap 4.
